

# All about Khalil

Dear Reader,

This Magazine focuses on my passions and things I love. For example my love for movies and how a writing sample helped me. In this magazine I write about how movies are very interesting to me and how much you actually experience while you watch a film. I also talked about a writing sample which helped me better understand how to do good writing pieces and how to do a good job on something. Some unique things about me that I love are my interests in photography and cooking. I love watching professional cooks make food and talk about it while they make their dishes. I would love to learn how to cook dishes when I'm older but for now I just cook simple things and make up food ideas myself.

Another thing I enjoy is photography. I love seeing perfectly angled photos with great lighting. It is really fun and enjoyable to take "the perfect photo" and see other people's photos. Another thing I enjoy more than usual is food. I really love trying new fast food places that I hear about. Every time I hear a fast food place open I try to get it as fast as I can. A place I really love is Chipotle. It's one of the easiest places to get a burrito that You can make to your satisfaction.

I am a Scorpio. I think the signs are very inaccurate and don't make sense. Just because you are Scorpio doesn't mean that you are the description of a Scorpio.

**Last year when I was in 8th grade all of the students got a random topic on a slip of paper. We had to write as much as we could in a period of time on the computer. This writing test was seeing how our writing skills were for getting into high school. My topic was about your favorite vacation. I wrote about a trip my family took to Utah in 2019. We saw our scores right after the time limit was up. We all knew if we scored high enough to get into the school we wanted to go to.**

**I am the main character but my science teacher Mr. Bentz was walking around the room checking on us. They mixed up the different 8th grade classes so there were lots of kids that weren't in my homeroom. The computer was a character because it determined my score and helped correct some stuff.**

**The room felt like a normal class taking a test. I was in my homeroom class which I was used to. It was in the science classroom which is big and filled with cool artwork on the walls. There were also aquariums with turtles and fish.**

**It made me feel like I had to try my hardest to do well on the writing sample.**

**This experience helped me learn how important some writing skills are. Trying hard helped me achieve what I wanted, which was to get into SLA. This will help me do better in high school because I will keep trying to work hard on something important.**

I've always loved movies. I like to start and finish a movie series. When I watch movies I feel very into it. When I am in theaters it always feels like I'm really in the movie. When I watch movies I usually like to watch them by myself to get the full experience without distractions. Even though I like to watch movies by myself, usually it is very fun to experience movies with your friends. I think movies are very important to have a fun break once in a while with your friends, family or just by yourself. watching a movie is great because you get to see great cinematography and acting. I have been watching movies since I was very young. One of the first movies I remember watching was The polar express. I do not like watching movies more than usual unless they are very good. Some movies I have watched a lot are Holes and many Spider-Man movies. I Love watching movies because I usually know the after and the quality of movies is very good. Even though I love movies a lot I would never want to work at a movie theater producing a movie or acting in one. When I was younger most movies scared me but that was part of the fun. Some movies I enjoy and would recommend iare Holes and the 2022 Batman movie.

Sincerely,  
Khalil Gorenstein

# NEVER FORGET

(...HOW BIG OUR BURRITOS ARE)
