from https://admityogi.com/

This website is what I am trying to accomplish when it comes to my project for the college

process. I will meet with different alumni to guide them or offer some help if needed.

This website shows an interesting perspective on how to accomplish my goal. From

listening the profiles to what they did in highschool it gives a good guidance guide to

students who might need help. From what they did and connecting it is a good reference

point.

https://stanforddaily.com/2022/10/10/frosh-found-start-up-aims-to-shift-college-admissions-indus

try/

This start-up is very unique. One thing i would change when it comes to a more global idea to

not show all of the stats of the students. In my opinion, I think that "Comparison is a theft

of joy". Students should not be able to be able to feel like they have to achieve the ivy

league dream. Students should be comfortable with knowing what is working for them

and how strategies can help them become successful instead of just looking at stats that

stress them out.

https://www.mathematica.org/

This website is aimed to use data to predict different outcomes. I don't think that this would be a

good idea because lately technology might not be able to help but with adding people it

could. I think the internship that I had which is Open Admissions is working on which can be helpful. This can give people a idea of what they need to have to get into a school. On top of that it can give me people motivation on what they want to do with improving their grades and offering more guidance.

[Open Admissions - Modernized College Admissions](#)

This was the company that I worked and I really enjoyed the work that I did, Finding solutions to help people achieve their goals was extremely inspiring. I would love to that with my capstone but take it to the next level. I see many websites that find a way to boast but you need to be able to find a balance between showing off and showcasing what a student can do with their skills.

[AI is about to blow up the $3 billion college application industry](#)

I decided to dig a little deeper into the Admit yogi website. I started to notice a trend when going through the website. It felt like that website was initially made for admitted or students that wanted to go to Stanford. There needs to be more ways to showcase other schools than just the same ones which people usually choose. There are so many universities that not a lot of people have talked that can be a better fit.

[The Power of Building Alumni Networks and How To Make It Happen](#)

Alumni networks can be extremely important. I wanted to start out by making a website by each major and a introductory video for students who would like support for their post high

school options. It can be very beneficial but I want to also help community centers who

don;t have the resources to be able to do this. I am fortunate enough to have those

resources but I want to give back to those who don't have those same opprtuniities that i

have and help them get those opportunities.

https://www.almabase.com/blog/designing-school-websites-that-connect-with-alumni-5-t

THis was a similar idea that i originally wanted to do. I know that Luca did it last year. I want to

make it more public though to the school. I think I might ask Luca for the alumni list in

case I want to capitalize on this idea. I think it is a great idea and I want to involve my

schoo, and underdeveloped communities.

ProjectConnect builds student connection. — Project Connect. (n.d.). Project Connect.

Retrieved January 17, 2025, from

https://projectconnect-us.com/build-student-connection

Project Connect was a very cool project to look at. I really enjoyed the process at how it was

built. Building connectings and brink by brick steps to become a successful version of

themselves if very important to me. I think that project connect is very useful and I feel

like something I need to capitalize for the school and the community around me.I found it

really interesting of how un popular this project is but at the same time how necessary it

is because this provides a lot of support.

Enriching the Community With Alumni Engagement. (n.d.). NASSP. Retrieved January 17, 2025,

adership-march-2019/enriching-the-community-with-alumni-engagement/

I choose this article because it is a project which is also helping with giving back more resources

to your fellow community members. I think that is very touching and meaningful to me as

I struggled a lot with what i wanted to do. I can help with brining communities involved

into what I want to do by bringing people together who don;t have the resources to

achieve their future goals.

https://www.insidehighered.com/news/2022/02/02/10-ways-strengthen-connections-students-so-

they-feel-seen

I wanted to read this article because it helps figure out a way of how students want to learn.

How communities and building something together where students have the opportunity

to build into their future means a lot to me.
